NAM JUNE PAIK AND SHUYA ABE, 1970

WOBBULATOR
ArtBase est. 1999
Founded in 1999, the Rhizome ArtBase is an online archive of new media art containing some 2153 art works, and growing. The ArtBase encompasses a vast range of projects by artists all over the world that employ materials such as software, code, websites, moving images, games and browsers to aesthetics and critical ends. We welcome submissions to the ArtBase; they are reviewed by our curatorial staff on a monthly basis. Read More »

Beautiful Soup

"A tremendous boon." -- Python411 Podcast

Beautiful Soup is a Python library designed for quick-turnaround projects like screen-scraping. Three features make it powerful:

- Beautiful Soup provides a few simple methods and Pythonic idioms for navigating, searching, and modifying a parse tree: a toolkit for extracting a document and extracting what you need. It doesn't take much code to write an application.
- Beautiful Soup automatically converts incoming documents to Unicode and outgoing documents to UTF-8. You don't have to think about encodings, unless the document doesn't specify an encoding and Beautiful Soup can't autodetect one. Then you just have to say the original encoding.
- Beautiful Soup sits on top of popular Python parsers like lxml and html5lib, allowing you to try out different parsing strategies or speed for flexibility.

Beautiful Soup parses anything you give it, and does the tree traversal stuff for you. You can tell it "Find all the links", or "Find all the paragraphs", or "Find all the "<strong>" elements", or anything else you need. It integrates with Python, so you can write Python code to do anything you need.

Beautiful Soup is available for free and open source. It depends on Python, which is also free and open source.

Beautiful Soup is a tool for downloading data from HTML and XML documents. It is not a replacement for parsing HTML; you should still use an HTML parser when you parse HTML.

Beautiful Soup is not a tool for building web applications. If you want to build a web application, you should use a web framework like Django or Flask.

Beautiful Soup is not a tool for crawling the web. If you want to crawl the web, you should use a web scraper.
